Ex No: 9 ANALYZE DIFFERENT TYPES OF SERVERS USING

DATE: 17.09.2024 WEBALIZER

AIM:

To analyze the different types of web logs using Webalizer tool.

PROCEDURE:

Step 1: Download Apache web server using- dnf install httpd

Step 2: Configure SELINUX to permissive mode

(open /etc/sysconfig/selinux Put SELINUX=permissive)

Step 3: Start Apache web server using- systematl start httpd.service

Step 4: Create a directory for webalizer using - mkdir /var/www/html/webalizer

Step 5: Install webalizer using - dnf install webalizer

Step 6: Copy files from /var/www/usage to /var/www/html

Step 7: Open /etc/webalizer.conf file and add the followingLogFile

/var/log/httpd/access_log

LogType clf

Hostname localhost

Output Dir /var/www/html/webalizer

Step 8: Save it and then run webalizer

Step 9: Open in web browser http://localhost/webalizer

Webalizer

#Instructions to install, configure and run Webalizer on Fedora

#Enter the root password after typing su

Su

1. Download Apache web server using- dnf install httpd

dnf install httpd

Configure SELINUX to permissive mode

(open /etc/sysconfig/selinux Put SELINUX=permissive)

vi /etc/sysconfig/selinux

Put SELINUX=permissive instead of enforcing

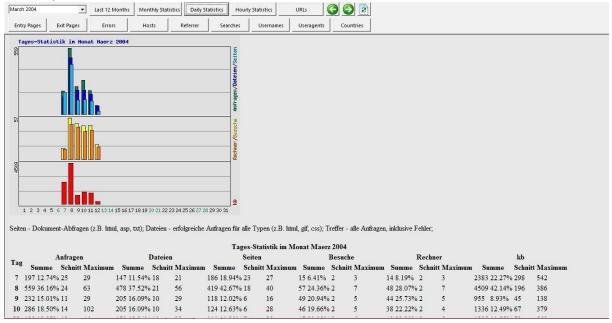

Step 3: Start Apache web server using- systematl start httpd.service

systemctl enable httpd.service systemctl start httpd.service Step 4: Create a directory for webalizer using - mkdir /var/www/html/webalizer mkdir /var/www/html/webalizer Step 5: Install webalizer using - dnf install webalizer dnf install webalizer Step 6: Copy files from /var/www/usage to /var/www/html cp -r /var/www/usage /var/www/html Step 7: Open /etc/webalizer.conf file and add the followingvi /etc/webalizer.conf #add the following lines LogFile /var/log/httpd/access_log #This is enabled in newer versions of fedora LogType clf Hostname localhost #For this one you can remove comment denoted by '#' OutputDir /var/www/html/webalizer Step 8: Save it and then run webalizer save it and then run Webalizer Step 9: Open in web browser http://localhost/webalizer Open in browser http://localhost/webalizer Click Oct.2023 link to get the report for this month

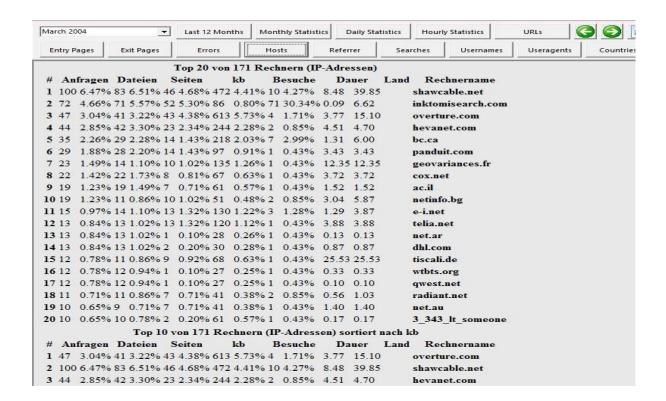

Before running webalizer, restart httpd server by typingsystemctl restart httpd.service

OUTPUT:

Hosts

RESULT:

Apache server using webalizer tools analyzed
